PAPER ... NOT VAPOR !!!

Since the 2000 Presidential election, many citizens have been investigating and publicizing their concerns about recent elections, especially in Ohio, Florida, New Mexico and other swing states. And it's happening here in Illinois! Despite the hype from private companies, far from being a solution, computers - particularly Touch Screen devices - are a significant part of the problem. Touch Screens have proven to be unreliable, insecure and inaccurate. A recent U.S. Government Accountability Office Report agrees:

"The report makes clear that there is a lack of transparency and accountability in electronic voting. State and local officials are spending a great deal of money on machines without concrete proof that they are secure and reliable. American voters deserve better."

- U. S. Representative Henry A. Waxman
